

Aristotle University of Thessaloniki (6G-IA full member)

ARISTOTLE
UNIVERSITY
OF THESSALONIKI

Agapi Mesodiakaki, PhD

Senior Researcher, Aristotle University of Thessaloniki

Center for Interdisciplinary Research and Innovation

Aristotle University of Thessaloniki (AUTH)

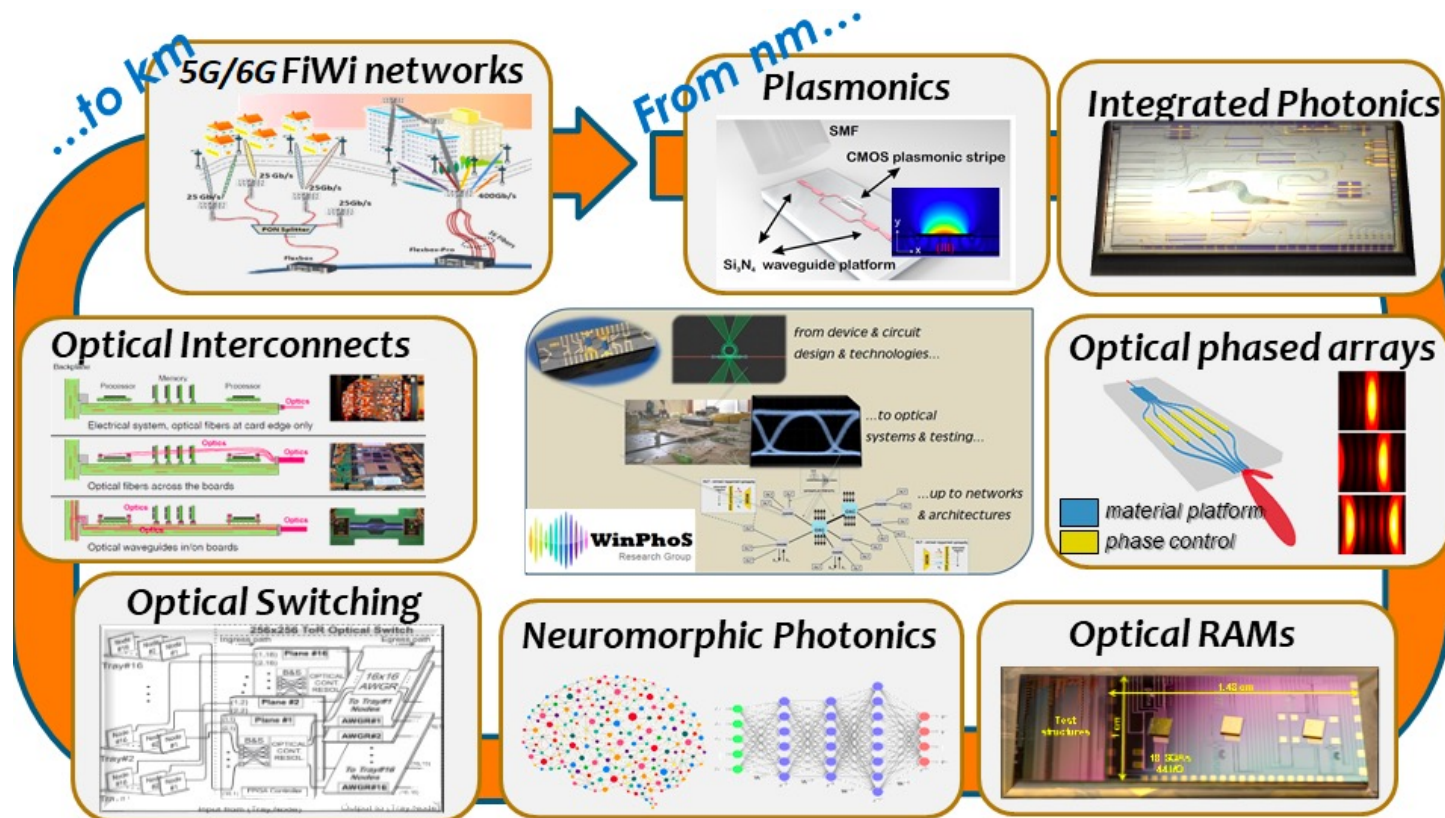

- Greece's largest University, founded in 1925
- Main campus located in the center of Thessaloniki (second largest city in Greece)
- 11 Faculties
 - ❖ **Physical Sciences, Engineering**, Law, Economics and Political Sciences, Agriculture Forestry and Natural Environment, Health Sciences, Education, Theology, Philosophy, Physical Education and Sport Sciences, Fine Arts
- 40 Schools
- > 85,000 students (~77,000 undergraduate, ~6500 postgraduate, ~3900 PhD students)
- > 1600 faculty members

- Numerous off-campus facilities (partial list):
 - ❖ University Farm
 - ❖ Teloglion Foundation of Art
 - ❖ Mount Olympus Meteorological Station
 - ❖ Center for Interdisciplinary Research and Innovation (CIRI, KEΔEK)
 - 22 research groups in diverse inter-disciplinary domains
 - Our group: ***Wireless and Photonics Systems and Networks (WinPhoS)***
 - Collaboration between departments of Physics, Informatics and Electrical & Computer Engineering
 - 5 faculty members, 11 senior researchers, >15 PhD/MSc students
 - > 22 FP7 and H2020 projects (>5 as coordinator)

Summary of WinPhoS main research interests

- **Optical communications (switching, interconnects, PICs)**
 - ❖ Optical computing (optical RAM, optical cache) & neuromorphic processing
 - ❖ Silicon integrated photonics and plasmonics
 - ❖ Laboratory evaluation of prototypes
- **Optical/wireless systems, Radio-over-Fiber, converged Fiber/Wireless architectures**
 - ❖ System/component modelling and network simulations in 3D networks
 - ❖ FiWi MAC layer protocols and performance analysis
- **Beyond 5G, 6G heterogeneous 3D network architectures and protocols**
 - ❖ Multi-RAT (mmWave/THz) X-hauling architectures in integrated TN-NTNs
 - ❖ E2E joint resource allocation optimization models and algorithm development
 - ❖ Design of field trials and testbed evaluation
- **Matching SNS-2024-STREAM-B:**
 - ❖ 01-01: System Architecture
 - ❖ 01-02: Wireless Communication Technologies and Signal Processing
 - ❖ 01-03: Communication Infrastructure Technologies and Devices

WinPhoS hardware infrastructure

Signal Generation

6-bit DAC @ 35GHz & 100Gsa/s

LiNbO₃ Mod @ 40GHz

RF Amplifier @ 65GHz

RF MUX up to 64Gb/s

FPGA Board with 900Gb/s optical transceivers

Soon

- RF signal generation capabilities of **120Gsa/s!**
- InP modulators up to **56Gbaud/s!**

Signal Reception & Analysis

Signal analyzer up to 50GHz

RTO @ 63GHz & 160Gsa/s

BERT up to 64Gb/s

35GHz IR Photoreceiver

- InP Photoreceiver up to **70GHz**
- Balanced PD up to **43GHz!**
- BERT up to **64Gb/s**

32-element Tile

Massive MIMO antenna @ 60 GHz

D-band antenna @ 160 GHz

Other capabilities

Photonic Network Analyzer

Up to 50GHz

Optical amplification

EDFA and PDFA optical amplifiers are available

Wire Bonder

Team

- Leader, George K. Karagiannidis
- 9 PhD students+1 Visitor PhD Student, 3 Postdocs
- One of the most cited research group in Telecom and Signal processing

Prof. Karagiannidis

- IEEE Fellow, 2015-2023 Clarivate Analytics Web-of-Science Highly Cited Researcher
- Humboldt Research Award (2022)
- 2021 IEEE Communications Society Radio Communications (RCC) Committee Technical Recognition Award, for Outstanding Contributions to Wireless Systems
- 2018 Signal Processing and Communications Electronics (SPCE) Technical Recognition Award of IEEE Communications Society for Outstanding Technical Contributions
- > 600 publications in journals and conferences, 8 filed patents (2 in EPO)

- Wireless Networks (5G and Beyond, 6G)
- Convergence of Communications and Computing
- Optical Wireless Communications
- Wireless Power Transfer and Applications
- Reconfigurable Intelligent Surfaces
- Next Generation Internet of Things
- Communications and Signal Processing for Biomedical Engineering
- Stochastic Processes in Biology and Economics

Thank you!

WCIP website:

<http://geokarag.webpages.auth.gr/>

AUTH faculty:

- Prof. Nikos Pleros: npleros@csd.auth.gr
- Prof. Amalia Miliou: amiliou@csd.auth.gr
- Prof. Kostas Vyrsoinos: kv@auth.gr
- Prof. Kostas Siozios: kziop@auth.gr
- Prof. Leonidas Georgiadis: leonid@auth.gr
- Prof. George Karagiannidis: geokarag@auth.gr

WinPhoS senior researchers:

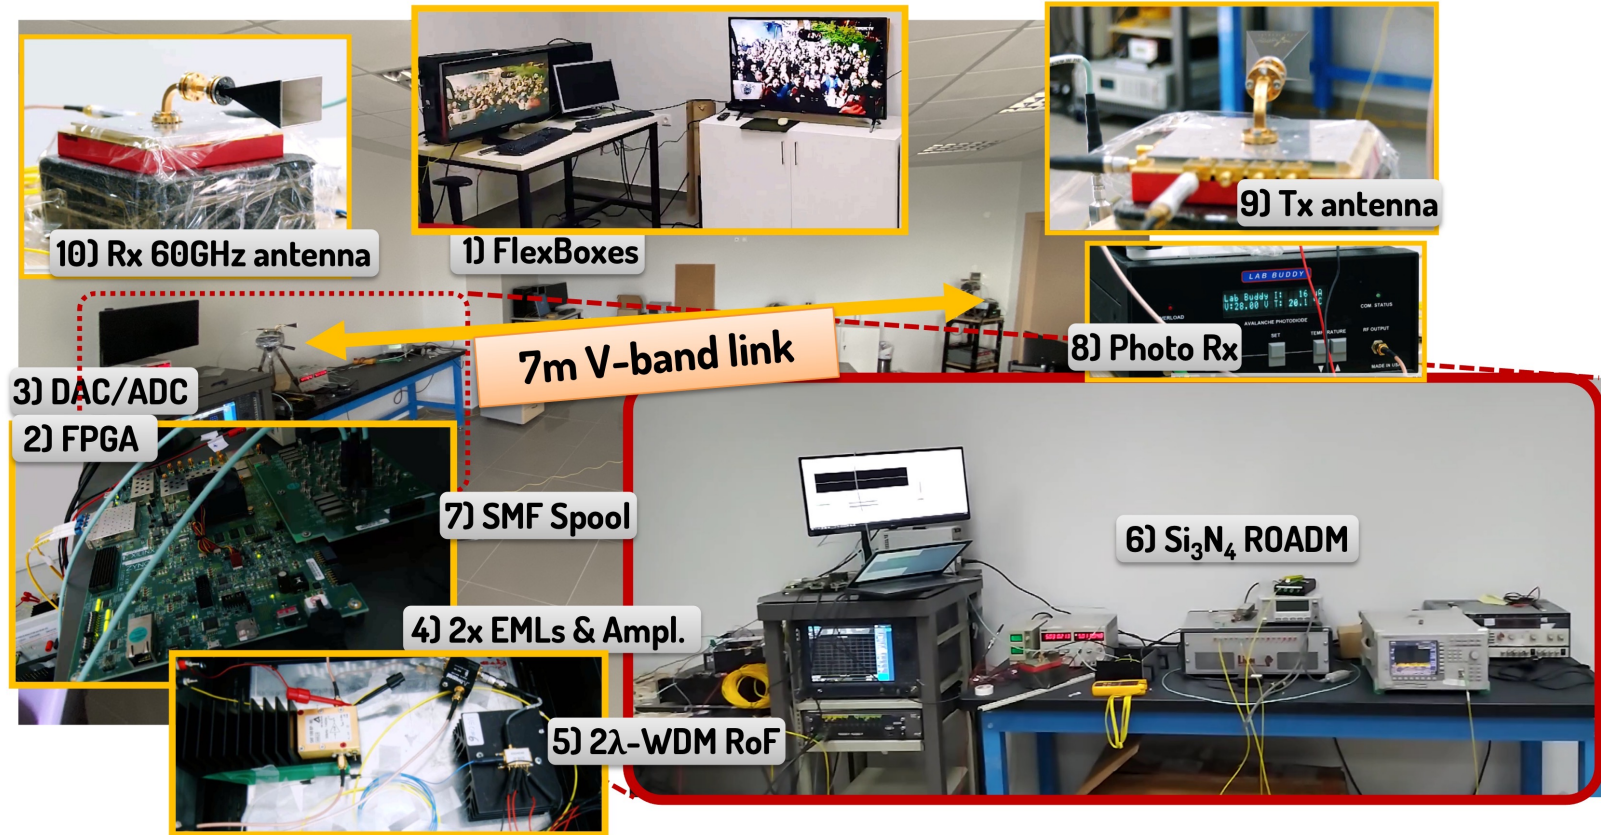

- Dr. Agapi Mesodiakaki: amesodia@csd.auth.gr
- Dr. Marios Gatzianas: mgkatzia@csd.auth.gr
- Dr. Chris Vagionas: chvagion@csd.auth.gr
- Dr. George Kalfas : gkalfas@csd.auth.gr
- Dr. Ronis Maximidis: maximidis@csd.auth.gr

Annex

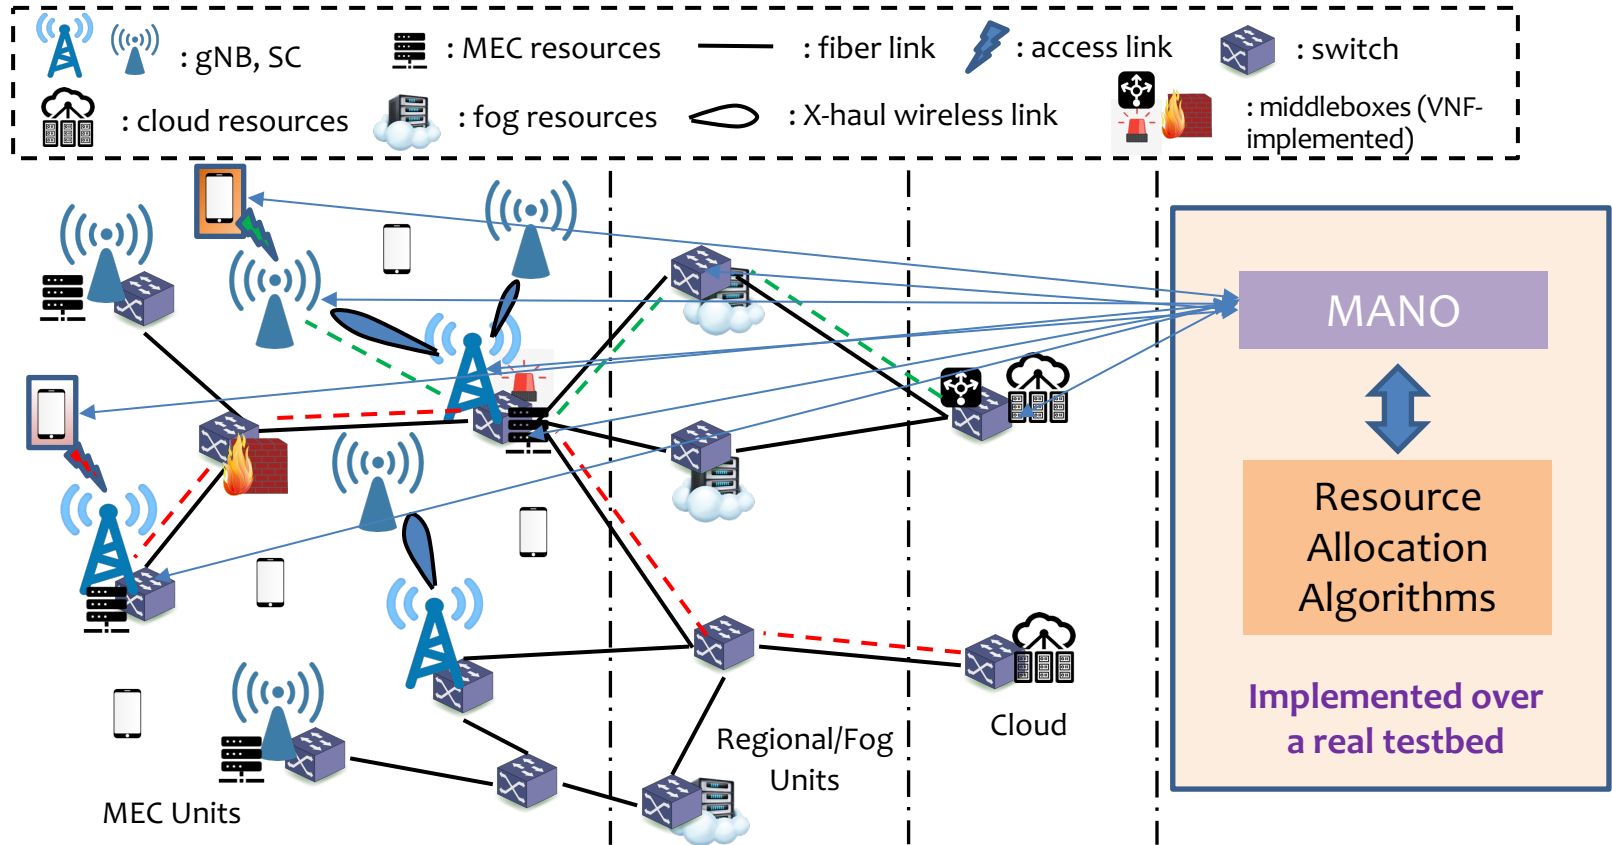

5G pilot testbed at PAOK FC Stadium (H2020 5G-PHOS)

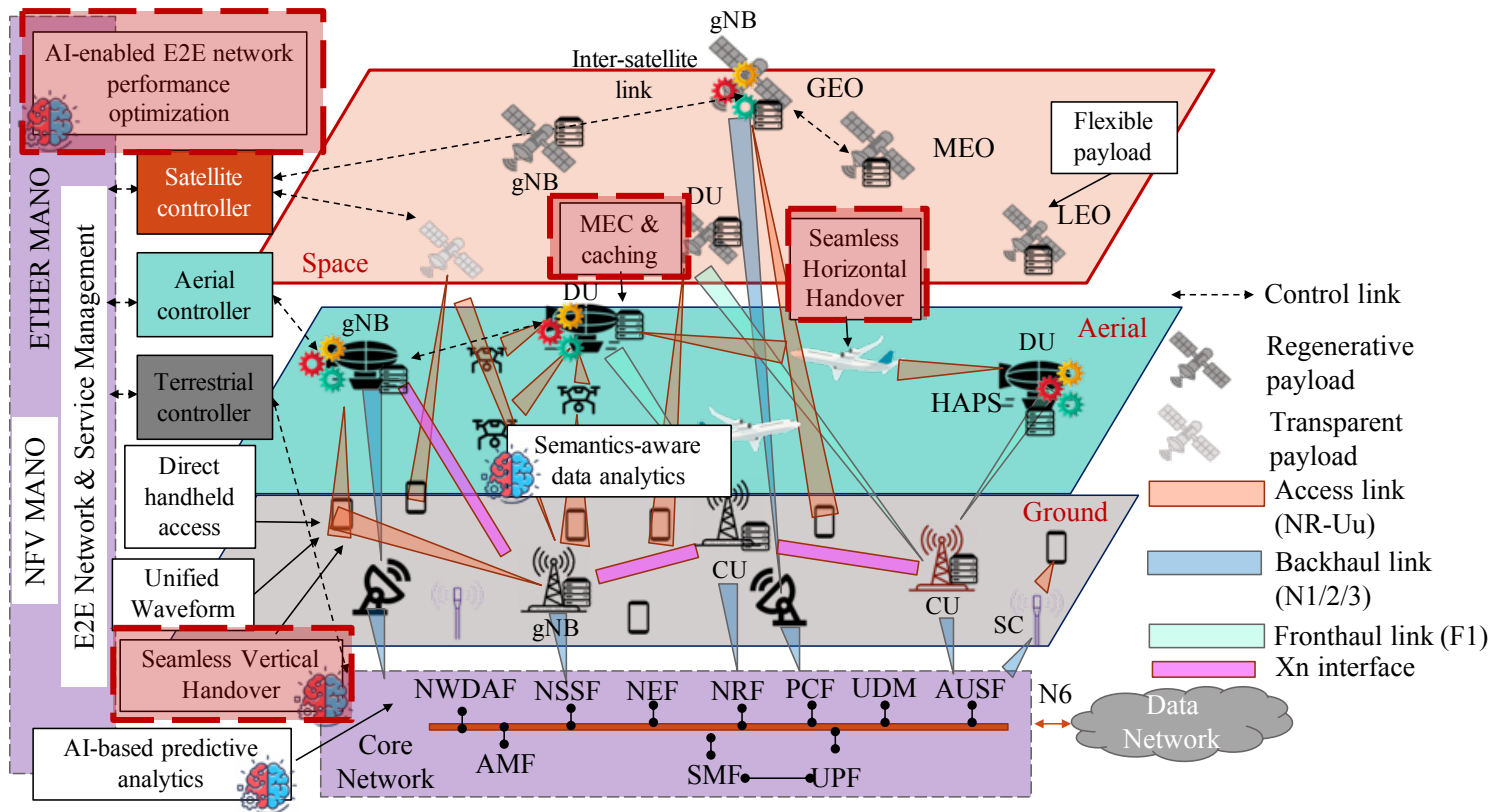

5G pilot testbed (indoor demonstrator) (H2020 5G-PHOS)

Online E2E resource allocation in 6G Hetnets (5G-COMPLETE)

E2E network optimization in 3D 6G networks (ETHER)

Additional WinPhoS infrastructure (1/3)

Massive MIMO
antenna @ 60 GHz

D-band antenna @
160 GHz

Additional WinPhoS infrastructure (2/3)

Vertical and Edge Coupling

3 axis piezoelectric controllers

Electrical RF probing characterization setup up to 50GHz
Upgrade to 67GHz and beyond -
Soon!

PICs characterization equipment

8-channel optical power meter

1260 – 1360 nm O band TLS

1500 – 1630 nm C band TLS

High Res. OSA

IR Camera

InGaAs Sensor
640 x 512 pixels
(400 nm - 1700nm)

Automation

Fully automate passive characterization measurements on a chip scale

Hardware

- **Mini HPC cluster** (8 workstations, 160 cores, 960 GB RAM)
- **NI-USRP** Software Defined Radios (wireless testing)

Software

- **Lumerical** for EM simulations
- **VPIphotonics Design Suite** for system level setups
- **Synopsys** and **Nazca** for GDSII Design
- **Matlab** for wireless system modeling and optimization algorithms
